Education

Indian Institute of Information Technology (IIIT) Tiruchirappalli, TN, India
B.Tech in Computer Science and Engineering; CGPA: 8.3 2019 – 2023

Experience

- **Fresh Gravity** Pune, MH, India
  Software Engineer Apr 2026 – Jul 2026
  - Centralized data validation rules into reusable entities and added audit logging across a legacy Python/FastAPI backend, giving full traceability for regulated clinical-trials data.
- **nRev.ai** Pune, MH, India
  Software Engineer Jan 2025 – Mar 2026
  - Implemented adaptive chunking in long-running workflow nodes — a runtime check on vendor API latency decides whether to continue in the current Lambda or checkpoint and hand off to a fresh one — ending 15-minute timeout failures and diagnosed B2B client workflow failures.
  - Built a PySpark pipeline on AWS Glue that converted a 4TB compressed external dataset into structured, partitioned Parquet on S3, keeping total compute cost to $250.
  - Migrated 50+ workflow nodes to chunked execution model with per-vendor rate limiting and retry/backoff, keeping 500+ live workflows stable at 50K+ daily executions.
  - Built the Midbound real-time visitor intelligence integration end to end from a customer request, streaming visitor signals into a campaign engine running 3000+ campaigns/month.
  - Built reusable workflow variables and the free test mode UI — a paginated 5-row preview at workflow and node level for cost-effective quality validation before full executions.
  - Built the Playwright E2E foundation for the Next.js app (fixtures, auth state, page objects) and wired it into GitHub Actions CI, cutting manual testing effort by 85%.
  - Built the workflow builder canvas in Next.js and React Flow with custom node and edge types, layout, and interaction handling.
  - Built an agentic QA workflow (Claude Code, MCP) that ran browser tests, captured errors and auto-raised tickets and fix PRs; with an autonomous Claude PR-review agent, cut dev time by 40–50%.
  - Contributed to a Gemini 2.5 Pro LLM agent that generates workflows from natural-language prompts, using tool calling and structured outputs to emit valid workflow graphs for the orchestration engine.
  - *Tech: AWS (Lambda, Glue, S3, IAM), Python, PySpark, FastAPI, Next.js, TypeScript, React Flow, Playwright, GitHub Actions*
- **Betacrew Solutions Private Limited** Mumbai, MH, India (Remote)
  Software Engineer Sep 2023 – Jan 2025
  - Shipped a fitness challenge platform end to end as sole engineer — Node/Express + PostgreSQL backend, React + Ionic web, native (iOS/Android) — hitting 5,000+ users and INR 8,00,000 revenue in 18 days; now 1M+ users across 1,000+ cities with 100k+ Play Store installs.
  - Integrated six fitness device providers (Fitbit, Google Fit, Garmin, Apple Health, Strava, Health Connect), normalizing all six into one activity model behind live leaderboards.
  - Fixed the database under post-launch load — added missing indexes, wrapped writes in transactions, added uniqueness constraints, and wrote safe dedup scripts to clean duplicates already in production.
  - Owned schema design, feature planning, and releases across web, Android, and iOS, plus payments, physical reward fulfilment, and the admin dashboard.
  - *Tech: Node.js, Express, PostgreSQL, React, Ionic, OAuth 2.0/1.0a*

Technical Skills

- **Languages:** Python, TypeScript, JavaScript, SQL
- **Backend:** FastAPI, PySpark, Pydantic, Node.js, Express, REST, OAuth 2.0/1.0a, webhooks, rate limiting
- **AWS:** Lambda, Step Functions, Glue, S3, IAM
- **Data & Infra:** PostgreSQL, Parquet, Redis, Docker, GitHub Actions, CI/CD, Playwright, System Design, Observability
- **AI & Agents:** LLM APIs (Gemini, Claude), prompt engineering, tool calling, structured outputs, agentic workflows, MCP
- **Frontend:** React, Next.js, React Flow, Tailwind, Ionic

Achievements

- **Hackathons:** Won 4 hackathons; organized IIIT Trichy's first hackathon to promote "Learn By Doing".
